

633030 Collapsible Possum Cage Assembly Instructions

Unpack possum cage from box and remove cable ties

Unfold cage and stand upright as pictured

Push side bars down...

...and lock into bottom clips

Bring the back door on the right end down into vertical position. Next, take the locking bar (above), insert the bottom pointed edge of the bar through the top hole in the plate at the back right of the cage as well as guiding the hook above the 5th bar from the bottom. The bottom pointed edge of the bar then threads through the two cage clips and out the front side through the top hole of the plate. The hook then sits over the 5th bar from the bottom edge on the front side.

Turn the cage around. Place thumb of your left hand on the lower bar of the door locking mechanism & pull the top sliding bar downwards with remaining fingers, whilst pulling the bottom of the door upwards towards you with your other hand

While holding the door up, turn the small latch on the top right hand side around until its hook goes under the roller pin of the door and holds the door in the open position

Ensure that the back end of the long pin is hooked into the back trip plate on the bottom of the cage

Place front hook end of the long pin through the remaining loop of the small latch on the top right hand side to set the cage

Place bait inside the cage by the back door, on the other side of the bottom trip plate
